Miss Purdon ☺

Numeracy

The HTU on the boards means hundreds, tens and units (or ones).

I am holding love numbers to make 20.
 $19 + 1 = 20$.
It is so easy!

When counting in 2's, we had to fill in the missing numbers.

We measured different distances in mm, cm and metres.

We practise counting in 5's and 10's ... like this!

In Maths we Miss Nadeem do a lot of drew lots of fun stuff. We numbers on the play games on table with the iPads and plus signs and we play card games. had to work out the answers.

We turned cm into metres and mm into cm. I found it quite easy to work out, I like Maths.

We completed special problems for Miss Phillips using different measurements.

We need to be able to count to

We work on the carpet with Miss Nadeem to practise lots of different things.

When we were learning about tens and units, we split up numbers. So $56 = 50 + 6$.

We practise counting up and down. With Miss R we had a Demon Hunters challenge. We counted how many soda pops there would be 'altogether' (special word).

IDL The Rainforest

16.9-27 Food Chain
This report is about food chains.
What is a food chain?
A food chain shows how energy is passed between
producers and consumers.
Producers are plants and other organisms that make their own food.
Consumers are animals that eat other organisms.
A food chain starts with a producer and ends with a consumer.
The energy flows from the producer to the consumer.
Leon

We traced around our hands and fingers to create tree pictures.

We held snakes called Corn Snakes. The name of the snake we met was Galaxy. I had the chance to touch the huge skin that the snake had shed.

We painted on our hands and pressed them onto paper to make creative leaf pictures for Rainforest trees.

We created reports about food chains and then made actual chains to show which animals in the Rainforest eat each other. It is amazing!

The most friendly animals in the zoo were the tortoises. They used to be very small and have been held by so many people since then, it doesn't bother them.

This is watercolour painting

We have been drawing all of the animals that live in the Rainforest.

We saw frogs, fruit bats and loads of insects.

The most dangerous animal we saw was a Honey Bear. It was kept safely behind the glass.

We folded the paper and drew each of the levels of the Rainforest. Then our teacher asked us to label the levels too.

We had a special goodbye to our topic with a visit to Amazonia.

We held a tortoise and they said you could hold it like a sandwich or a burger.

16.9-25 Food Chain
This report is about food chains.
What is a food chain?
A food chain shows how energy is passed between
producers and consumers.
Producers are plants and other organisms that make their own food.
Consumers are animals that eat other organisms.
A food chain starts with a producer and ends with a consumer.
The energy flows from the producer to the consumer.
Writing is much easier now.
