

Rainforests

by primary 5

Rainforests are...

Rainforests are as dense as fog,
They hold many species, including the tree frog.
The trees are tremendously tall,
rain drops shimmer, splash and they fall.
The forest floor is as dark as coal,
Watch out for Mr Mole digging a hole!

Awesome Animals

Parrots are a rainbow of colour,
but the beetles are slightly duller!
Creepy crawlies tickle the trees,
snaky snakes slither and sneeze!

Precious Plants.

As green as a grasshopper, as beautiful as gold,
there are thousands of species young and old!
Precious plants are being cut down,
with paper being made and heading to town.
The Pitcher plant is as dangerous as dynamite,
flies become trapped as they aren't very bright!

Brilliant Benefits

Rainforests are brilliant and they are good,
They give terrific tribes plenty of food.
Magical Medicine can be made and they also produce clean air,
cutting them down would be really unfair!
