

Fractions and Proportion

Learning Objective:

To be able to convert improper fractions into mixed numbers.

$$\frac{7}{4}$$

What do we call
this type of fraction
where the numerator is
bigger than the
denominator?

$$\frac{7}{4}$$

This kind of fraction is known as an improper fraction because the 'proper' way to show a fraction is showing part of a whole. Improper fractions are more than the value of one whole. You should use whole numbers with fractions whenever you can.

What would this fraction be if we converted it into a mixed number?

$$\frac{7}{4} = 1 \frac{3}{4}$$

As a mixed number (where you have a whole number then a fraction) this would be $1\frac{3}{4}$ because there are four parts in each quarter. If you have seven parts altogether, that makes one whole with three parts left over.

$$\frac{7}{2}$$

Can you change this improper fraction into a mixed number?

Did you get that right? How did you work it out?

$$\frac{7}{2} = 3\frac{1}{2}$$

$$\frac{13}{4}$$

Can you change this improper fraction into a mixed number?

Did you get that right? How did you work it out?

$$\frac{13}{4} = 3\frac{1}{4}$$

$$\frac{8}{3}$$

Can you change this improper fraction into a mixed number?

Did you get that right? How did you work it out?

$$\frac{8}{3} = 2\frac{2}{3}$$

$$\frac{25}{8}$$

Can you change this improper fraction into a mixed number?

Did you get that right? How did you work it out?

$$\frac{25}{8} = 3\frac{1}{8}$$

$$\frac{22}{5}$$

Can you change this improper fraction into a mixed number?

Did you get that right? How did you work it out?

$$\frac{22}{5} = 4\frac{2}{5}$$

Good job!
Time to have a go on
your own!

Plenary:

Can you write the picture above as an improper fraction and as a mixed number?

$$\frac{16}{6}$$

or

$$2 \frac{4}{6}$$

Did you get those right?

Can you write this picture as an improper fraction and as a mixed number?

$$\frac{27}{5}$$

or

$$5 \frac{2}{5}$$

Did you get those right?

Can you write this picture as an improper fraction and as a mixed number?

$$\frac{13}{4}$$

or

$$3 \frac{1}{4}$$

Did you get those right?
