Gibbous

# Why Does the Moon Appear to Change Shape?

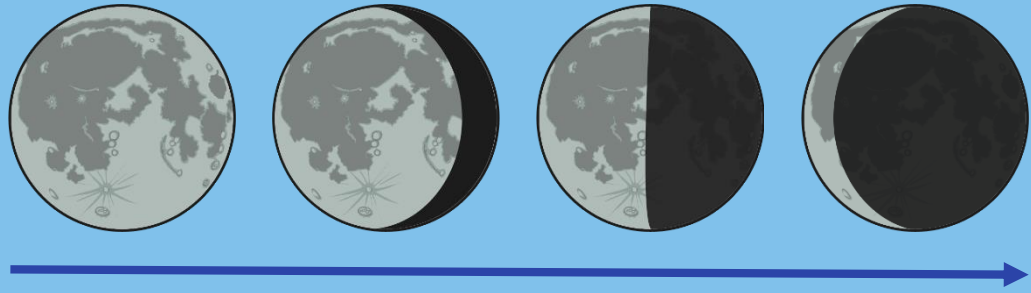

The Moon reflects the Sun's light.

What part we see of the Moon depends on where the Moon is when orbiting the Earth.

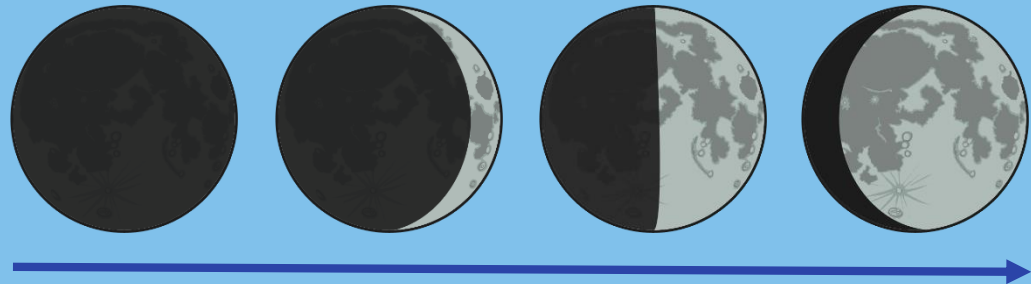

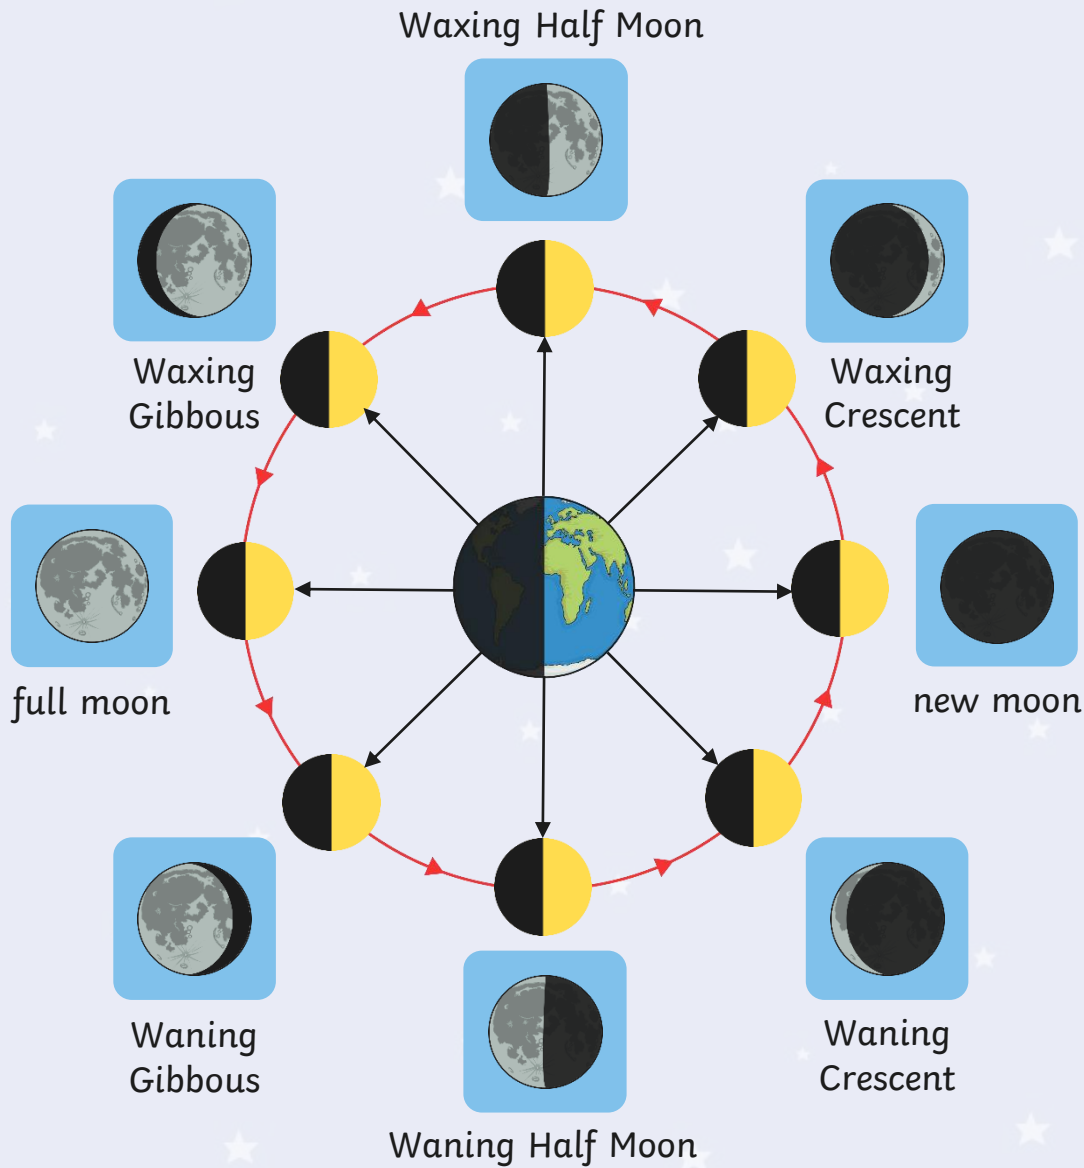

# Waxing and Waning

**Waning** when the amount of the moon we can see gets less

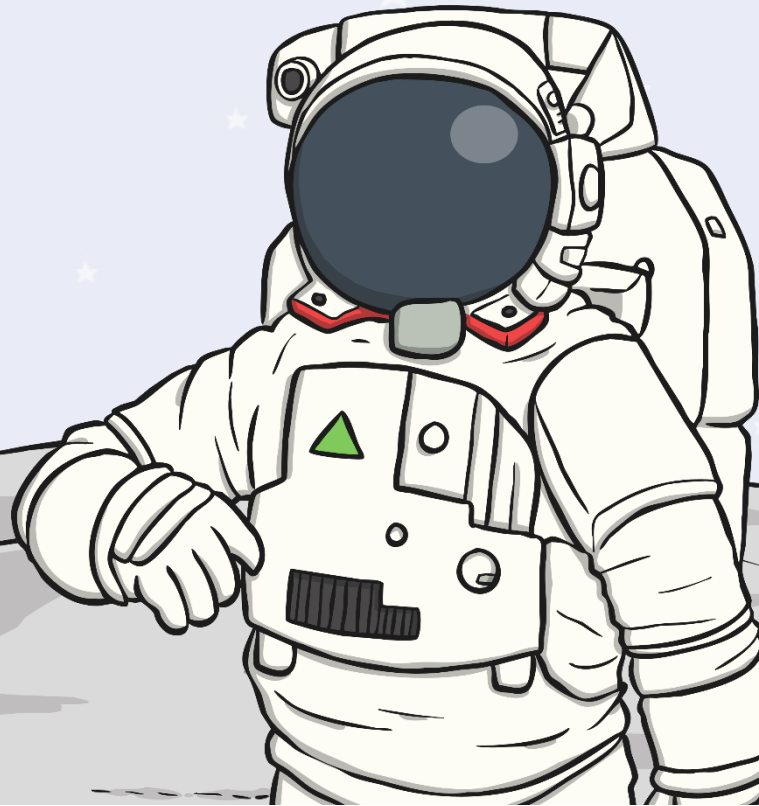

**Waxing** means that we can increasingly see more of the moon after a new moon.

Sunlight

Who was the first  
person on the Moon?

Neil Armstrong, Apollo 11, 1969
