

A Quick Guide to: Camera and Photos

Camera

Use camera to record what is around you

1. When you open Camera, the standard mode is “Photo”. You can swipe the mode selector at the side, up or down to choose a different mode: video, slo-mo, time-lapse, pano
2. You can turn the camera round to front facing using the circular arrows above the shutter button
3. Pinch or spread fingers to zoom in and out, or tap & swipe on the magnification
4. Tap the part of the image that you want the camera to focus on. To change the focus, tap a different part of the screen.
5. Change the exposure by dragging the sun up or down on the screen to make the picture lighter or darker.
6. Use the grid view and the central line to straighten your image and compose your shot
7. Delay your shot using the timer (3s or 10s)
8. Tap the shutter button to take your photo / video

Photos

Powerful tools for enhancing and organising your photos

1. Open photos and tap and photo or video to open it, then select edit at the top
2. To crop or straighten, tap the crop button. Drag the corners to crop and drag the sliders on the right to adjust the angle.
3. Flip or rotate the image
4. Adjust the image's exposure, brilliance, contrast, saturation and tint etc using the adjust option on the left and sliders on the right
5. Add filters such as dramatic and mono using the filter option on the left and the sliders on the right
6. Add text, writing or shapes by tapping on the mark up tool (pen).
7. Tap done to close the tools and done again to exit edit
