

A Quick Guide to: Edpuzzle

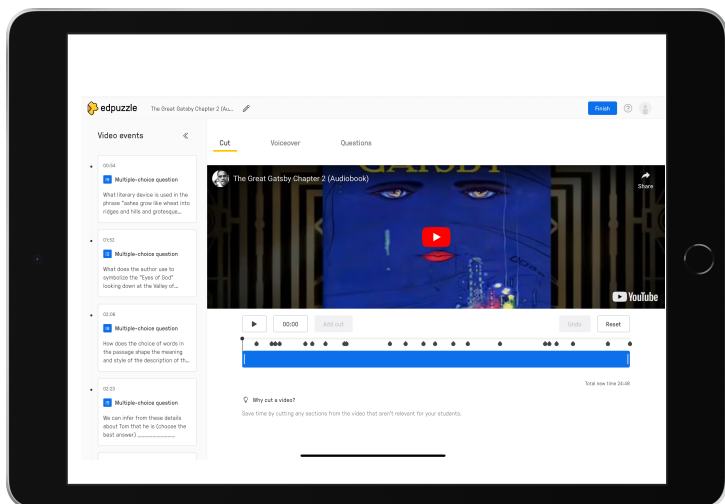

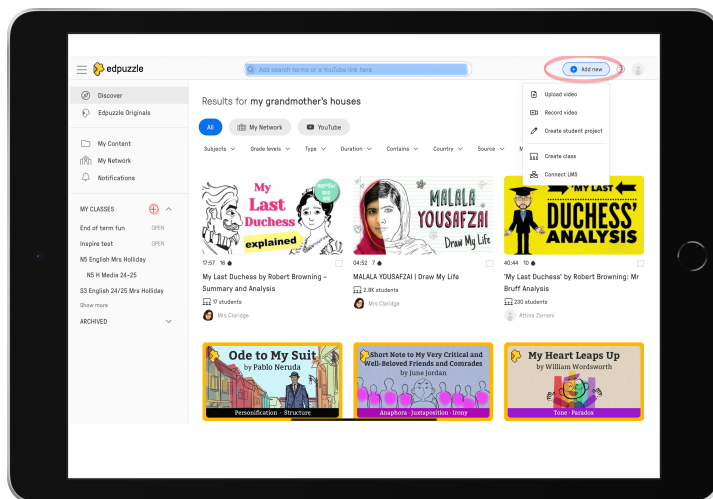

Edpuzzle allows you to use your own videos, presentations or any content from YouTube to create interactive video quizzes. They can be self paced by individual learners or completed all together as a class with each learner completing the questions to allow for discussion and assessment of learning.

To get started on the website, Sign up as a teacher using Microsoft and your Glow details.

Add a class - tap Add new in top right or the plus icon in the left hand menu under 'My Classes'

Use the search bar to look for any video on YouTube to use/paste a link to one you have already or tap Add New to upload your own video to turn into a quiz.

Once you have selected a video clicking on the edit option allows you to:

Trim to select only the parts you want

Add long form/multiple choice questions to exact parts of the video you want to.

Add/change existing questions already populated by others

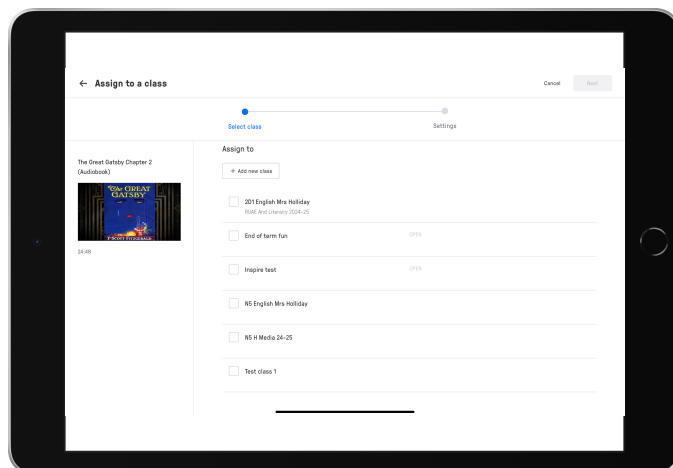

Add a voiceover to your own videos

Assign to classes

Once you have edited and added the questions you want - hit finish and then tap assign to send to the class you want to give it to.

You can also add new classes in this window too.

Give your class the code, copy the link and paste it to your preferred platform or email to your students. They will log in as a student using their Glow details and click the + to add your class.
