

A Quick Guide to: adding overlays

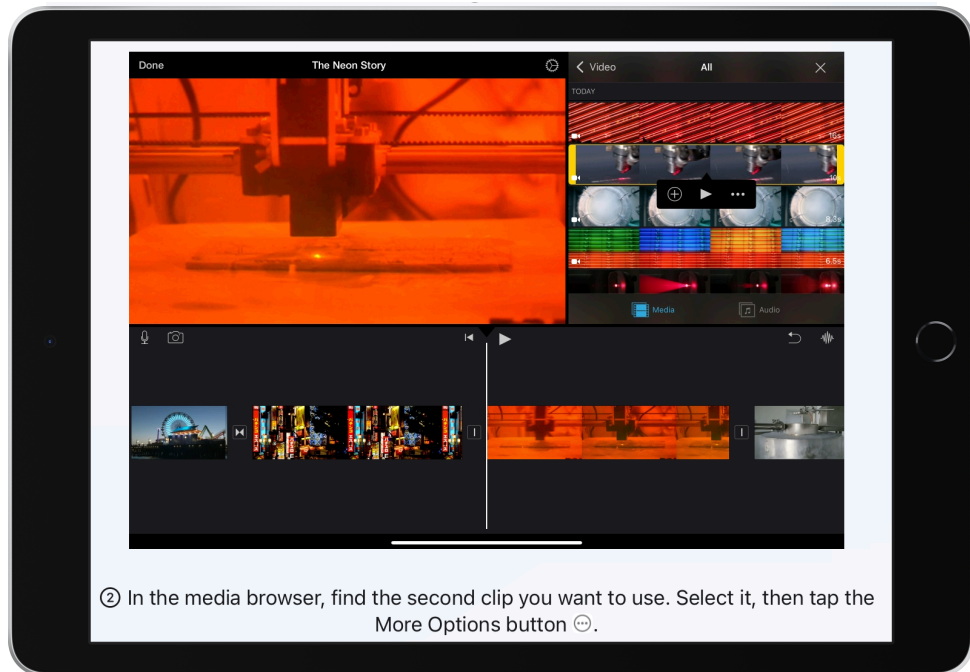

① Create a split-screen clip. Scroll the timeline to position the playhead over the first clip you want to use in the split screen.

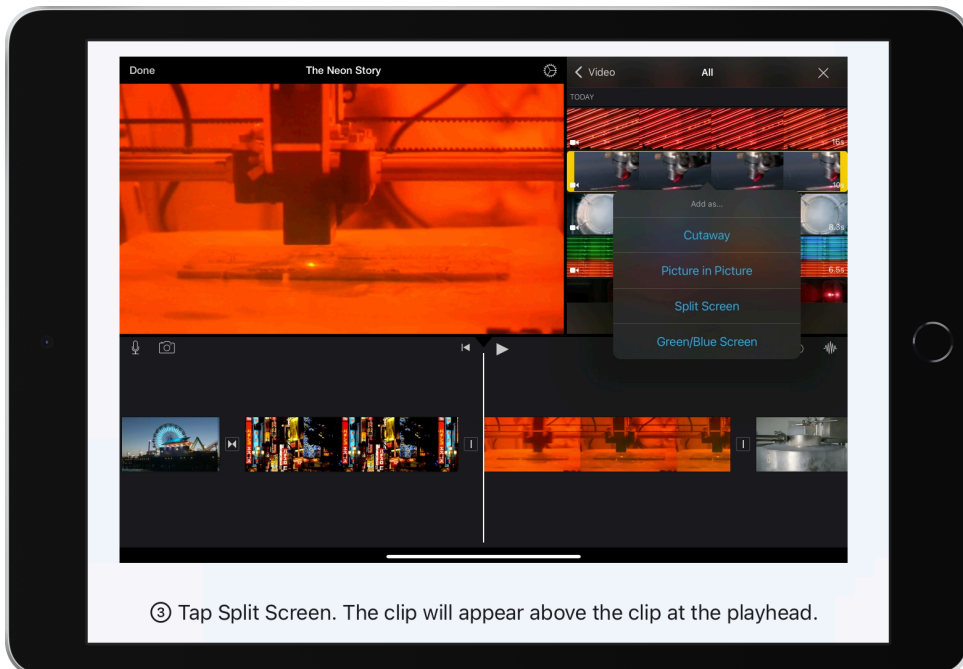

In iMovie you can add different types of overlays:

Picture in Picture
Split Screen
Cutaway

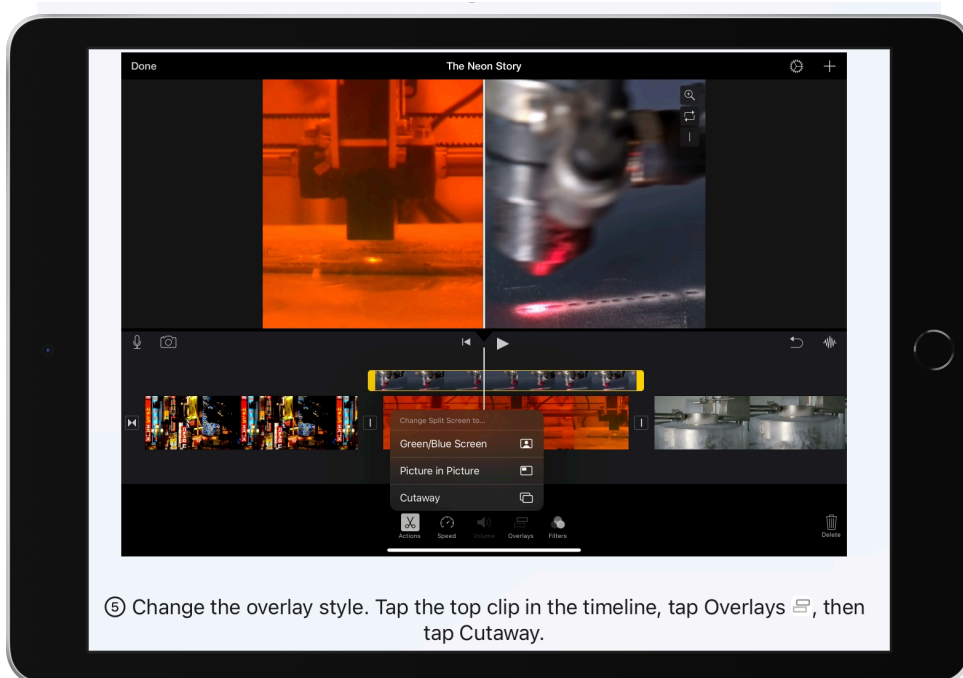

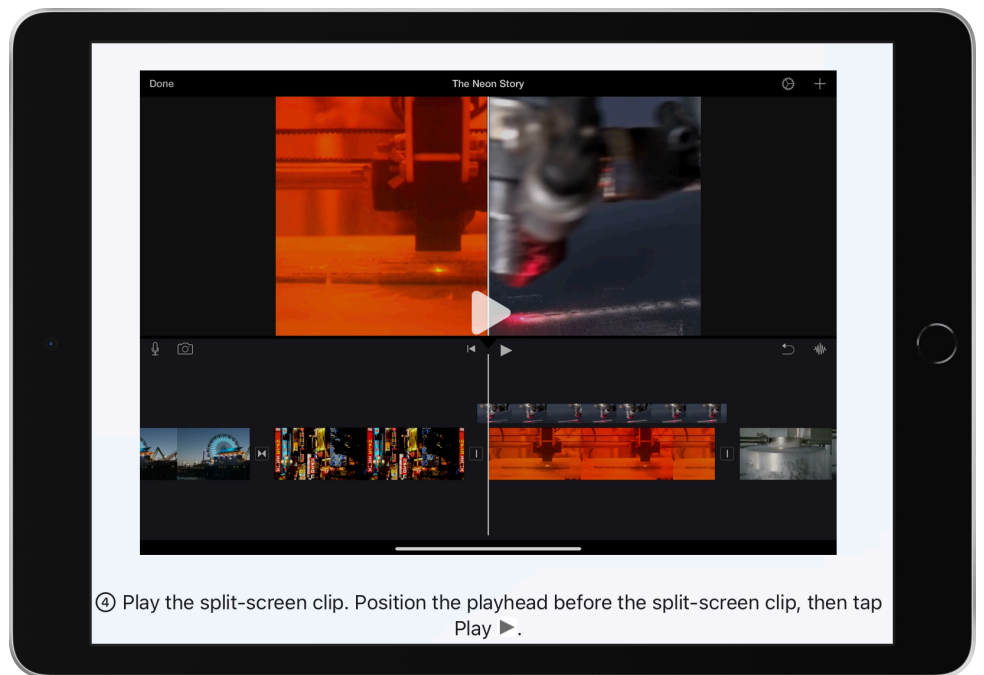

Here is how to add these to your project.

② In the media browser, find the second clip you want to use. Select it, then tap the More Options button ⋮.

③ Tap Split Screen. The clip will appear above the clip at the playhead.

You can easily change the type of overlay without deleting and starting again if you change your mind. This way you can see which works best for your project.
