The Picking Hand

Playing melodies

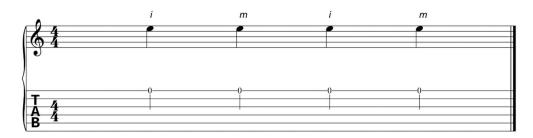

There are two methods for playing single note melodies on the guitar – fingerstyle and plectrum (pick). Here's a brief rundown of both!

Fingerstyle – The treble strings (G, B and e) are usually played with the fingers and the bass strings (E, A and D) are played with the thumb. We label our fingers like this:

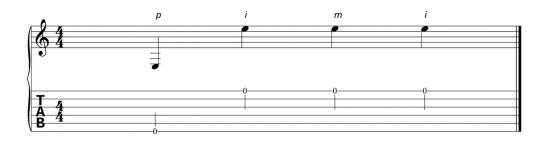

Initially, we'll practise playing with i and m alternating:

Fingerstyle Ex. 1

Then we can add in the thumb (p) playing a bass note:

Fingerstyle Ex. 2

Plectrum style

Playing with a pick seems simple, but to do it well is anything but!

Plectrum playing falls into two broad catergories – melody (the tune) and chords (eh... the chords, which we'll look at later).

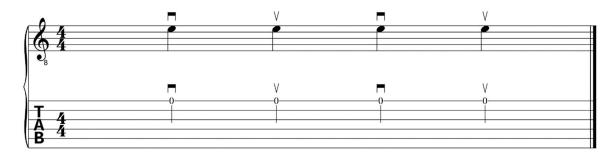

When you're playing a melody, you'll pluck one string at a time with the plectrum and when you're playing chordal guitar you'll play multiple strings.

The most important thing to remember when playing with a plectrum is that you have to hit the strings ON THE WAY UP AND DOWN! We call this alternate picking and for many players it's one of the most important techniques to master.

One of the most common mistakes people make is to try and play outside of their natural rhythm. Think of your picking hand as a conductor or metronome – try tapping the table for a few bars of four and see how easy it is to keep time. The same applies when you're strumming a guitar!

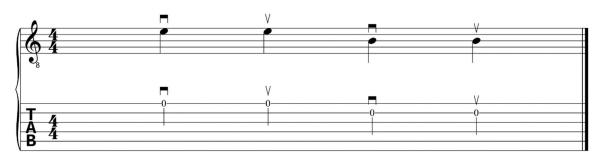

Here are some exercises to try out if you prefer to play with a pick. The \Box denotes a downward motion and \forall means hit the string on the way back up:

Picking Ex. 1

The alternating rule applies whether you're crossing strings or fretting notes:

Picking Ex. 2

Picking Ex. 3
