

## Home Learning – Science with Mrs. Clark

20<sup>th</sup> to 24<sup>th</sup> April 2020

### Scents

Your sense of smell is incredible – and the brain is hard-wired to be drawn to different smells.

How does your sense of smell work?

<https://www.bbc.co.uk/bitesize/topics/zgdmsbk/articles/zk342sg>

### You will need:

Bowls

Nature (flowers, stems, sticks, mud, leaves etc)

Water

Mud-kitchen tools (eg spoon, spatula, sieve, jars etc)

### Instructions

Let's experiment and explore creating different scents – can you make a sweet scent? A bitter one? A strong one? A clear one? A colourful one? What process did you use to create the scent? If you leave it in the sunshine/overnight/in a bottle does the scent change?

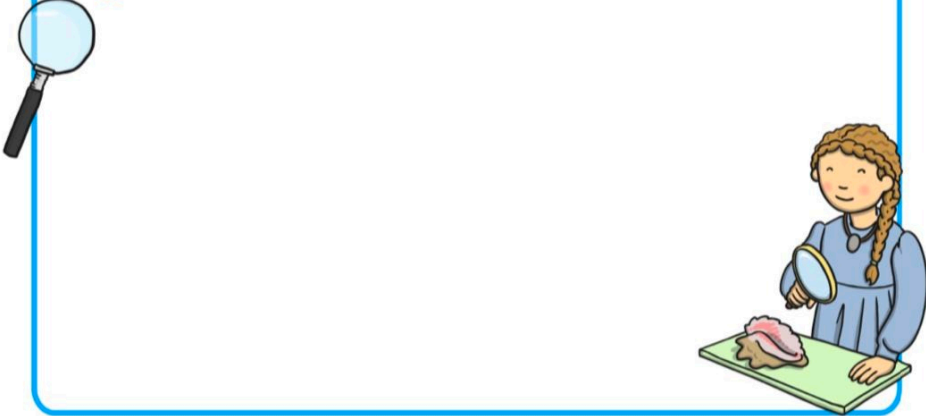

Why don't you keep an experiment log to record your findings?

Blank space for notes

### My Prediction

### My Results
