Incredible Icebergs

An iceberg may take thousands of years to form from layers of snow but children can make their own iceberg overnight!

You will need:

Jug, water, balloon, funnel, plastic bag, freezer, clear bowl, spoon, salt, scissors and a tea towel.

Instructions:

- 1) Fill the jug with cold tap water. Fit the funnel into the neck of the balloon, holding it in place, and pour the water into the balloon.
- 2) Tie the end of the balloon to seal the water inside. Put the balloon inside a plastic bag and freeze overnight.
- 3) Next day, fill the bowl full with water and add 5 to 10 tablespoons of salt to make seawater.
- 4) Take the balloon out of the freezer and remove the plastic bag. Cut the end off the balloon and peel it off the ice.
- 5) Using a tea towel to prevent your fingers sticking, place the iceberg in the bowl of salty water.
- 6) The iceberg should float in the salty water. Show children how only a small portion of the whole iceberg stays above the water's surface.
