

Night-time animals in Mrs Cook's garden

Can you spot the hedgehog, the badger, the mouse and the fox? The mouse is very small but you can see its eyes shining.

Why do you think they come out at night?

Can you guess what each one eats?

The mouse is looking for seeds on the ground under the bird feeders. The badger will eat the seeds too.

The badger, fox and hedgehog all like to eat worms, slugs and snails.

The mouse needs to be careful because foxes like to eat mice!

The hedgehog needs to watch out for the badger because badgers sometimes eat hedgehogs!
